FIFTH SUPPLEMENTAL DECLARATION OF PRIOR INVENTION IN THE UNITED STATES OR IN A NAFTA OR WTO MEMBER COUNTRY TO OVERCOME CITED PATENT OR PUBLICATION

(37 CFR 1.131)

Assistant Commissioner for Patents Washington, D.C. 20231

DECLARATION OF SCOTT CAVEY, KEVIN L. KIMLE, DAVID R. KROG, AND REYNOLD HARDER

- 1. We, the undersigneds, are either original named inventors in the above-identified patent application or the President and Chief Operating Officer of E-Markets, the Assignee of the above-identified application.
- 2. We have submitted in this application prior Declarations, which are incorporated by, reference herein.
- 3. This declaration is filed to respond to the Office Action of November 19, 2002 and to corroborate at least some earlier evidence and submissions in this application.
- 4. In preparation for this declaration, Scott Cavey spent on the order of __70_ days reviewing company records, interviewing employees and some of the named inventors, and reconstructing again the activities that occurred with respect to the subject matter of the above-identified patent application between roughly the summer of 1996 to the summer of 1997.
- 5. Scott Cavey also reviewed the November 19, 2002 Office Action, and the questions and issues raised by the Patent Examiner in it, and tried to track down information to further respond.

- 6. As a result, I took another roughly ___14___ days to compile and organize the information and present the following in support of the application. This information was compiled with the help of Kevin Kimle, David R. Krog, and Reynold Harder.
- 7. This testimonial is given to account for and testify to the activities that surrounded the generation of the concept to the launching of the final product we refer to as Net Contract. To address the specific issue that it was a continuous, concerted effort displayed to the reducing the concept to practice from prior to 9/4/96 to launch in midsummer 1997, you will see not only a continuous and concerted effort but you will see a committed effort.
- 8. Three of the patent applicants quit their jobs in mid 1996 and reduced their income to two consulting jobs and the creation of the Net Contract application. They formed the company, opened an office, recruited financing, designed the product, tested the concepts, developed a business plan, developed a prototype, developed the product from mid 1996 through mid summer 1997.
- 9. In that time the founders of the company were working for wages less than 1/3 of their previous earnings at the jobs they left to pursue the development of this application. That is a level of commitment that cannot be questioned. To elaborate in detail, this is the story of the development of the Net Contract application.
- 10. The Patent applicants include Kevin Kimle, David (Dave) Krog, Reynold (Rusty) Harder, Alan Schmitz and John Stucki. Kevin, Rusty and Dave are the original founders of the company E-Markets and the Net Contract Idea. John Stucki was a contractor who helped build the Application after most design and market concept testing was completed and Alan Schmitz joined the company at the tail end in July 1997 in time to launch the application and bring the application out of a local server into an internet connected environment and protected under a proprietary security platform.
- 11. As is well known in any kind of software development, a true application that is taken to market consists of 80% of the time spent in design and market concept testing and the last 20% is actual coding. This story follows a similar timeline and process.

PRIOR TO SEPTEMBER 4, 1996

12. Prior to September 4, 1996, Rusty, Kevin, Dave and Markatalana (an Iowa State University professor and computer programmer) met in the first formal documented meeting to discuss a concept they had been talking about informally since earlier when Kevin and Dave had attended a meeting at the University of Iowa on the topic of Iowa Electronic Markets. They talked about initial concepts of Electronic Trading. The meeting included discussions of the separation of responsibilities between the members; Rusty would look at the animal markets and modeled the supply chain of the integrated markets. Mark would look into what would it take in people, software, etc., and whether they could simultaneously do World Wide Web, software and link to FarmDayta. Dave Krog would investigate the Grain sector and explored both the concept of electronic

trading and electronic contract management. Kevin would look into financing, business design, electronic commerce options and partners and strategic options.

- 13. At this time all the members of the group were gainfully employed. They met in the mornings evenings and weekends to proceed toward the vision of a web based business to provided agriculture community, grain trading and contract management. Rusty and Kevin worked together on a Presidential campaign in IA and Dave and Kevin worked together at the state of the stat
- 14. Kevin Kimle and Mark Mark Followed up discussions on the technology needs and agreed to meet on with Dave and Rusty. The purpose of the meeting was to get Mark more comfortable in the concepts and to gain full commitment to joining the group in an eventual business. For three weeks each of the individuals was working on their area of responsibility outlined above.
- 15. Thereafter, Kevin and Steve Ringlee met to discuss the business concept and die options for financing the business. Steve was relatively new to IA from Boston but had a background in venture start-ups and financing. Steve would later join the team as one of the founders of the company.
- 16. Kevin met with Alan of Agriculture and the issues facing risk management in agriculture. Kevin and Mark followed upon technology issues.
- 17. Kevin met with New Coop in Ft Dodge to discuss how they use market information and how they would use electronic commerce.
- Rusty, Dave, Kevin and Mark met for a business meeting and discussed the findings so far, including Market research and financing discussions. The priorities moving forward were development of the prototype and defining the service offerings. In the meeting Mark decided he was not willing to commit to a new venture and recommended the team talk to Gary data as a potential technical lead.
- 19. Kevin met with Mike Turner at the University of Nebraska Lincoln to discuss the product concepts and the business opportunities. Mike helped line out the best companies and locations to discuss the concept with and to potentially involve in the development. The concepts discussed were specialty corn market contract manager, grain trading between elevator and farmer and management of quality and transaction requirements for the end user processors. The products, in Mike's opinion, with the most potential are the specialty corn contract management or the elevator electronic transaction system.
- 20. Kevin Kimle attended a conference in NYC where he learned about the Microsoft development model and the product scheduling to meet customer expectations.
- 21. Meeting with a technology company in Ames called the Spanning Tree. The leaders name is Greg Discussion included options for delivery of the product, using

VPN or WWW. They also discussed the potential needs for people and cost for a prototype. 4-6 people months and about \$200,000. That sounded real high. Kevin Rusty and Dave met later in the day to discuss the concepts from Spanning Tree.

- April 1996 was a busy month at the regular jobs of the founding team members. Rusty 22. and Dave were researching the animal and grain supply chain economics and Kevin worked met followed up with Greg at Spanning Tree on his concepts. April 15th Kevin met with developer Gary to determine his interest in being the developer based on the recommendation April 16th Kevin met with Aurora Coop to discuss the needs for the specialty com market and potential use of electronic applications. Kevin also met with C.P.I. in Hastings NR. April 17th met with Farmland and Peavey in Kearney NE on the same subjects. April 18th Dave and Kevin met with Ed is capable of doing the Accounting Software developer in Ames to determine if technical development. They did not have the right capabilities for the work. April 25 Dave and Kevin met to discuss the potential of bringing Gary con board to do the technical development. April 30th Met with Gary to discuss technical issues further and an initial evaluation period for Gary until Julyl.
- 23. May 5,1996 Kevin and Dave met to major areas of the business work plan, content, Transactions and Communication. May 8th meeting with Spanning Tree. Addressed technical options, Intellectual Property issues, scalability, and competitive pressures. Kevin also discussed the product presentation for courting investors and to discuss if financing will May 9th Kevin presented the four areas of product development 1) Business to Business Transactions, 2) Contract grower management system, 3) Specialties tenders and 4) International tenders. May 13th discussed vision and work plan with Context Consulting and they want to investigate the electronic tenders and Business-to-Business communications. This discussion eventually led to the first consulting project for the new E-Markets company and the evaluation of the B2B transaction application.
- 24. May 15th Kevin met with three business leaders in Ames and discussed the formation of a new business and he met with Context Consulting and Dave to map out a plan to go forward on the B2B work plan.
- 25. May 20th Kevin met with Steve Ringlee to detail the business startup issues and financing expertise Steve would bring to the group.
- May 22nd Kevin researched ECR. This is the first documentation of the concept of E-Markets systems being a longer-term replacement of EDL Kevin also revised the work Plan and documented the process for the evolution of the product from the concept. The plan is 1) phone surveys of multiple industry participants to discuss product concept and industry needs, 2) individual meetings in different states to dig into the needs and discuss the product concept in more detail, 3) reestablish the product idea design resulting in a prototype, 4) Develop a product prototype from scope drawings to technical creation, 5) Presentation creation including the prototype and 6) discussions with Key advisors, Longe and Tom (1994).

- 27. May 24th Kevin documented Net Contract database issues. Key issues will be using the company as the key relational link and also set up each sector as a separate database.
- 28. May 28th: Kevin also documented the Database structure connections. Database key structures are using the company ID as the relational link between contract info and customer survey info. Over the weekend the team has come to terms with how to wrap all the product ideas together. "Take contracting situations and form an information system to link to electronic transactions" the key markets for the contract management system should be High Oil Corn, Waxy Corn, White Corn and High Quality Yellow corn.
 - 29. May 29th Kevin met with Brian Buhr about the livestock industry and the use of E-Markets planned application. Brian later joined E-Markets in 1999:He also talked to Lon-about how fast E-Markets could be ready to go to market.
 - 30. May 30th Kevin and Dave met to discuss the Work Plan and to split up the business plan. Kevin also talked to Lon in a follow up discussion about companies looking to enter the Internet space, including Meredith Publishing and IA Institute of Cooperatives.
 - 31. June 1, 1996 Kevin documents his opinions on how to approach electronic transactions in preparation for his meeting the next day. Electronic bid ask systems are one type of simple price discovery transactions. Contracting is a more complex transaction since it includes Structure, Specification, Price and Enforcement.
 - 32. June 2nd Dave and Kevin meet to discuss the research Dave has done on the White Corn market.
 - 33. June 3rd Rusty and Kevin discuss a man named Charlie Tranger who is interested in the products E-Markets is developing. Charlie has connections at the for possible technical resources. Charlie eventually joined the team and also was one of the company founders.
 - June 6th Rusty, Dave and Kevin get together to work on the presentation of the Net Contract system for white corn to present to Frito Lay, Bartlett and Quaker. June 7th Kevin worked on the new Presentation.
 - 35. June 12th Met with the Dept of Ag.concerning the revamped product. Kevin documents the business process and how E-Markets fits in and the first documentation of the anticipated revenue model.
 - 36. June 18th Dave and Kevin complete a Supply chain for White corn.
 - 37. June 19th Kevin meets with Bartlett Grain on their White Corn process.
 - June 20th Kevin met with Brian Buhr who has a technical lead prospect. Kevin, Rusty, and Dave also met with Charlie Trauger to discuss the vision for the new company.
 - 39. June 22nd Dave and Kevin meet to discuss a research recap on the value proposition for a White Corn buyer like Frito Lay. The issue of information ownership and data security is

documented as a serious question that needs to be decided. Kevin worked on the Frito Lay presentation. Setting up Frito Lay presentation and finishing up the prototype worksheet.

- 40. June 30th Security issue is addressed with documentation of multiple levels of security.
- 41. July 1,1996: Dave and Kevin discuss what is needed in the Frito prototype design.
- 42. July 2nd Kevin documents the design of the Frito prototype.
- 43. July 3rd Kevin met with a farmer for Frito Lay and the purchaser of Frito Lay to discuss how their contracting system works.
- 44. July 5th Dave and Kevin meet to discuss the Frito Lay information and set up a follow-up on 7/10.
- 45. July 6th Dave and Kevin meet with Spanning Tree to discuss potential as a technical provider. Spanning Tree needs a detailed scope to tell how and if it can help.
- 46. July 7th-10th Kevin worked on the business plan and developed the investment materials. Documented business plan design on July 8th.
- July 11th and 12th Kevin met with Frito Lay to follow up on the last meeting and set a second meeting for 7/30. Frito needs a system to show price changes in real time for contracts.
- 48. July 13th Rusty and Kevin met with Charlie Trauger. July 14th Wrote draft of the business plan.
- 49. July 16th Kevin leaves his full time job at to focus full time on E-Markets.
- July 18th The team met to line out the next two months goals. First documented discussion about a system independent portal where the software is a value added portal and the personal portal works through a LAN connected to the Internet where the modem connection diverts the user to our network and enables the browser application to be accessed. Today this is called Webservices.
- 51. July 19th Kevin worked on Business plan.
- 52. July 22nd Kevin met with Mark series a potential technical developer. Rusty, Dave and Kevin met to discuss Technical developer.
- 53. July 23rd Kevin worked on small business financing with Marv Walters.
- 54. July 24th Met with Context Consulting on a project for Kodak. July 25 worked on Kodak project and researched the cotton market with the USDA to evaluate its applicability to the Net Contract application.

- 55. July 26th Talked with former Microsoft employee about technical development. He did not fit the needs. Continued research on cotton
- July 27th 28th In Omaha with Charlie Trauger, Dave, Kevin and Rusty included discussion on technical options. Charlie is working on alternatives but at the moment did not believe he would need a server yet.
- 57. July 29th Kevin met with Steve Ringlee and lined out the modules for the new website. The modules will include E-Tools, E-Contract, E-Connect, E-Info and E-Transact.
- 58. July 30th Kevin traveled to IL and met with Frito and discussed the next steps in their contracting deal.
- 59. August 1,1996 Kevin set up new Internet service and hired an attorney to handle the business setup and legal issues. He also completed the Business Plan.
- 60. August 2nd Worked on Kodak project for Context Consulting.
- August 3rd Kevin developed the value proposition for Frito and completed an e-Markets presentation to explain what E-Markets applications would offer a company like Frito.
- 62. August 4th Meeting with Dave, Kevin and Charlie in Omaha.
- 63. August 6th Set up direct cable Internet connections and worked on consulting project.
- 64. August 7-9thWorked on consulting project.
- 65. August 9th Made contact with Ed McMillan, former Purina Mills CEO to discuss being on a board of Advisors. Meeting set for 8/21.
- 66. August 12th. Kevin met with Steve Ringlee about the financing discussions.
- 67. August 15th Company incorporation papers are drawn up.
- 68. August 16th Kevin drew up Product/Service grid connecting application functionality to service access levels and met with Marvin Hayenga a future investor in E-markets.
- 69. August 17th Team meeting discussed new security platform company called Prism that Charlie found.
- 70. August 19th Kevin met with Scoular grain on specialty corn contracting.
- 71. August 20th. Kevin met with Bartlett grain on White Corn contracting.
- 72. August 21st Kevin met with Ed McMillan to confirm him being on the Board of Advisors.

- 73. August 22nd Followed up with Mark who had talked with Geoff Anderson of Agris about systems for Agriculture.
- 74. August 24th Registered the domain name for e-markets.com.
- 75. August 26th Kevin detailed Strategic observations in notes and again shows different concepts for Contract management and Bid Posting and transaction processing.
- 76. August 27th Meetings with Kevin, Rusty, Dave, Steve Ringlee, and suggests talking with Murphy Farms.
- 77. August 28-29thWorking on consulting project for Context Consulting to bring in some money

SEPTEMBER 4, 1996 AND AFTER

- 78. September 4, 1996 Dave and Kevin review the consulting projects and they make an offer to Brian Buhr to join the team and focus on the swine business. He declines but would eventually join the company in 1999. Kevin is working on finding appropriate office space instead of working out of the basement of his house.
- 79. September 6th Dave quit his full time job at the september to focus solely on E-Markets. The team met at 4:30 and discussed progress on the goals, prototype development issues, and the Business Plan and Admin issues.
- 80. September 7th worked on Consulting project for Kodak.
- 81. September 9th Kevin and Dave worked on the Kodak consulting project.
- 82. September 10th Kevin met with Tom an E-Markets Advisor to discuss progress and talk about leads.
 - 83. September 11th worked on Kodak consulting project.
 - 84. September 12th research with NGFA on the previous EDI project referred us to Cargill, Continental and
 - September 13th Meeting with Kevin and Steve Ringlee updated that Spanning Tree is out of business and Greg than has moved to Ottawa. Since July when Greg asked for a detailed document he has been focused on saving his business and has not come up with any solutions for building the Net Contract prototype. Researched transaction costs with University of Minnesota. Also Kevin worked on the priorities of who to focus attention on to get financing, technical development and a customer for the application. Dave met with Tom to discuss his input on the new business. Tom was formerly the head of

- 86. September 15th Kevin worked on the value spectrum in grain transactions.
- 87. September 16th Kevin met with Greg to finalize the technical discussions they had before he closed his business and moved. He referred us to Bob to Kevin talked to Frito Lay and they are going to put the Net Contract discussions on hold until after Harvest, Oct 2 tentative meeting.
- 88. September 17th worked on Consulting project for Context Consulting and set up a meeting with a former grain trader in Minnepolis.
- 89. September 18th Dave and Kevin attended and E-Commerce conference in Minneapolis. Kevin and Steve discussed incorporation issues Trilogy as a Tech Service provider and the business plan update.
- 90. September 19th attending E-Commerce conference.
- 91. September 20th Kevin met with Marv Hayenga a future investor and an ISU professor. He referred us to Continental AgriTech as a possible Technical provider. He also met with Agris Corporation a software developer for Ag Retailers and with Trilogy about their development process. Kevin documented our process and the process of our customers to help Trilogy understand our development cycle.
- 92. September 23rd Group Meeting Charlie is responsible for finding the technical development partners. Steve is responsible for the system to track developments. Kevin also met with John Green of the National Corn Growers Association to research emerging corn markets from a farmer's standpoint and how the farmers will engage in the new markets and can electronic commerce help.
- 93. September 24th Kevin researched Canola market and Sunflower market for Net Contract systems.
- 94. September 25th Kevin and Dave met with Zeneca, a large life science company, with a part ownership in ExSeed, a corn genetics company, about the need to understand the value in the corn value chain, and how can they capture the value to an integrated company.
- 95. September 26th worked more on the sunflower industry, contacts with the USDA and Nat'l Sunflower Assoc. Also captured names and numbers of the key Sunflower industry seed suppliers.
- 96. September 27 29th worked on consulting project for Context Consulting.
- 97. September 30th Kevin met with Rusty and Steve Ringlee to discuss trademark findings and investor follow-up. Rusty introduced Wendy Gramm to the company's concept and she would like inforce information. Kevin confirmed the meeting with Frito Lay on 10/2.

- 98. October 1, 1996 Rusty quit his fulltime job at and went part time to be able to dedicate ½ days to E- Markets Inc. Kevin and Dave visited University of Nebraska staff to present Net Contract and transaction application concepts. Met with Jim Kendrick.

 Afterward they met with Charlie Trauger and Prism Company to discuss how Prism could be the technical provider.
- 99. October 2nd Dave and Kevin met with Frito-Lay. They are interested in electronic commerce but want to do the contracting internally. This is the beginning of the end of our conversations with Frito Lay since we want to push forward with Net Contract before electronic Trading.
- 100. October 3rd Travel back to Ames and reprioritize the direction after the Frito Lay meeting.
- 101. October 4th Update from Trilogy Software on their discussions on building the Net Contract prototype.
- 102. October 7th Dave and Kevin made a trip to Minneapolis to discuss Net Contract concept with Ed Usset formerly of Pillsbury and Central Livestock Co.
- 103. October 8th Incorporation paperwork is in process. Discussion with Cargill in Blair NE on Specialty corn for processing and how the contracting procedures would fit our concept.
- 104. October 9th met with Northrop King a seed company about electronic selling. Researched the Lotus Collaboration system. October 10th discussion between Kevin and Sparks Commodities about how they have advanced on their website for Livestock and how they dealt with the security issues. Dave talked with Dow Elanco about their nutrient dense corn and High Oil corn. They are interested in talking to understand the market and application better. Dow eventually became a customer and this was a key first meeting. Dave also met with Tim **The **a consultant to Ag Companies about the company's product ideas.
- 105. October 11th Charlie Trauger had been working on the technology providers and he and Kevin discussed the progress.
- 106. October 14th Kevin revised the PowerPoint prototype presentation and included the personalized page and content pages along with the product applications. That drawing needs to be put into a full flow chart diagram and scoped for a developer.
- 107. October 15th Kevin worked on the product diagram including the Interactive Business Center, Net Connect, Net Contract, Net Market and Net Sale.
- 108. October 16th Dave and Kevin worked on the list of issues such as the process cannot start with the Farmer issuing a bid. It won't work. What can E-Markets do in terms of focus need to get financing to fund development also need to line up the technical partners

soon. Kevin would focus on the Interactive Business Center and Dave would focus on Net Contract and put together the proposal for the proposal

- 109. October 17th and 18th Dave worked on the proposal for and Kevin worked on consulting projects for Context Consulting.
- 110. October 19th Business meeting with the Dave, Rusty, Charlie, Kevin and Steve.

 Discussed the progress on Mycogen, Frito, Sparks, St Paul Conference,

 Monsanto and Omaha meeting, as well as company formation and trademark issues.
- 111. October 21 Meeting with Zeneca to discuss the presentation and the topics to detail are Revenue/Margin and Sales vs. Cost.
- 112. October 22nd Kevin and Rusty traveled to Omaha for a presentation by Mike Harper CEO of ConAgra Foods. Also met with Charlie to discuss progress on the technical issues:

 Need Html prototype, a new server and a Technical Partner.
- 113. October 23rd E-Markets, Inc. received its authorization as a corporation and the Articles of Incorporation were posted after two months of paperwork and process.
- 114. The proposal was completed and presented to for review on October 24th and a logo for Market Works was developed. On the 24th Dave and Kevin met with Zeneca about the specialty crops tomatoes and Potatoes. There may be an opportunity for data capture but the technical traits are not prevalent in these crops yet so contracting is done differently. System would need to include profile information and delivery data for value capture.
- 115. October 27th worked on consulting project for Context Consulting.
- 116. October 28th Dave and Kevin worked on Consulting project for Context Consulting.
- October 29th meeting with Zeneca reviewing Tomatoes and Potatoes there are some new Bt traits being developed in Potatoes. Also tracking down a contact at Anheuser Busch for barley contracting. Rusty quits his fulltime job at Jan to focus more time on E-Markets.
- 118. October 30th Kevin worked on Interactive Business Center content. Rusty worked on the Zeneca presentation.
- 119. November 1,1996 Dave and Kevin made the presentation to Zeneca.
- 120. November 4th and 5th worked on Mycogen Proposal for a seed producer system, Net Contract system and direct sales system and need a system to work with partner arrangements like Dow Elanco.

- 121. November 7th Dave and Rusty worked on the Feed mills research and gathering High Oil analysis data from Ohio State University.
- 122. November 10th Kevin is developing front-page content and working towards a downloaded front page.
- 123. November 11th shopping for LCD projectors. The presentations are too difficult to do on a computer screen. Prices are \$6,000-\$8,000.
- 124. November 12th Kevin worked on the Kodak consulting project.
- 125. November 13th Kevin worked on how to launch an application like Net Contract from within a browser like the Interactive Business Center. The solution seems to be to frame the application in the browser window.
- OMO patents in the contracting process. The patent issues cannot be open to everyone only to those with Biotech licenses so the sensitive information would have to show after issuance of the contract. In other words the final contract specifications are not disclosed until after the obligation is committed to. Kevin travels to Rochester to meet with Jim Becker to discuss a proposal for building an electronic market that is not just bid ask but instead incorporates the quality and genetic information in the filtering and breaks the matching down into relational matches of quality and genetic data before price is ever negotiated. Some of the Net Contract features fit here but it is not an exact fit.
- 127. November 17th Charlie has met with and is recommending the group visit with another custom developer named Patrick . November 18th Dave met again with Mycogen and they will have a high oil Corn product and do not know whether they will contract grow or not. Kevin was setting up new Internet connections and new phone lines and purchasing the new LCD projector.
- 128. November 19th Kevin met with DuPont they expect acreage of High Oil corn to double in 1997.
- 129. November 20th Dave and Kevin meet to discuss the approach for both Mycogen and DuPont Both of who would eventually become customers of the Net Contract application. A Prototype for Mycogen is outlined.
- 130. November 21st and 22nd Dave and Kevin travel to Indianapolis and Minnesota for the ISTA presentation and a meeting with Mycogen seeds. The Mycogen meeting went well but they want help defining the value proposition on a per bushel basis.
- 131. November 25th Finished the Net Contract prototype and worked on framing design within the Personal Business Center. Dave has met with Croplan Genetics and they spend a lot of compupating elevators on seed seed.

- 132. November 26th company meeting and updates on corporate governance issues Steve is working on, Database structure discussion, Discussed Security platform, hardware, software encryption and SSL. Need to develop a security matrix.
- 133. November 27th Dave worked on the product database and the profile information needed by the companies they have visited with the past six months, for the Net Contract application.
- November 29th created presentation including Home page, Personal Business Center, Project listing (check contract specifications), Database entry, Data Reporting, Query results Download Query, Contract Home (Info, Bid, Delivery info, Crop Conditions, Contract database), Bid issuance, Delivery status, Crop Conditions, Destination Delivery Information.
- 135. December 1,1996 Charlie has been having a person named Jay Froscheiser build the prototypes and now is working on the actual web applications Kevin has designed. He believes the Home page is too difficult for him and that we need to get a hosted location set up.
- December 2nd Prototype is built and Kevin is looking into Sprynet as a hosting company. Steve found another referral for a Java programmer. Kevin set up a meeting with Dan Hammes and Tom Adler of DuPont. They would turn out to be the first customers for Net Contract.
- 137. December 3rd Dave and Kevin presented a proposal to They were interested in Net Contract but thought they could do it internally. Dave and Kevin also met with DuPont's Optimum Quality Grains. They are going to build an Internet presence and will begin interviewing prospective vendors on Dec 9th.
- 138. December 4th Charlie begins work finding someone to Host. Kevin sent him the new prototype and he needs to find a system capable of FTP access.
- 139. December 5,1996 Kevin has worked out the restated Articles of Incorporation to address voting rights.
- 140. December 5th -11th Kevin worked on a consulting project for SGI, which investigated the genetic traits available in grains.
- 141. December 7-8th Kevin creates the page designs for Net Market, an application to post elevator bids for processors to access.
- 142. December 9th -10th Charlie has located options for the hosting and the necessary hardware including a P-200, 56K relay for LAN, using Digex and ColdFusion and news content from Backweb.
- 143. December 12th Kevin rebuilds the homepage design and Personal Business Center.

- 144. December 13th follow up meeting with Steve's java programmer referral. Kelvin is developing real-time systems in Java.
- 145. December 13th -31st Dave was working on consulting projects for Context Consulting.

 December 16th and Cash is short so Dave Rusty and Kevin work on a consulting project called Grain Industry 2000.
- 146. December 27th Charlie has found an alternative for the demo development It requires an NT server. The timeline would be a Mockup by Jan 3, HTML by Jan 10th and presentation on Jan. 17th. E-Markets needs to provide database expertise.
- 147. January 2, 1997 Context Consulting introduces John Stucki to E-Markets.
- 148. January 5th Dave, Rusty, Steve and Kevin met to set goals and objectives including the Grain Industry 2000 project, creating the E-Markets Home Page and Demos for Net Contract, Net Market and Net Connect. Dupont Demo and meeting presentation.
- 149. January 6th Kevin visits with Todd at Aurora Coop in NE about contracting White Corn.
- January 7th Kevin purchased Front Page to do the mockup homepages fro the demo sites. January Steve Ringlee wants to participate day to day now that things are starting to click. Kevin and Dave meet with John Stucki to discuss him becoming the developer for Net Connect, Net Contract and Net Market.
- 151. January 9th created DuPont homepage for the presentation Demo.
- 152. January 10th Rusty worked on the DuPont Demo data creation.
- 153. January 11th Kevin finished the latest design on the homepage and sent it to Charlie for creation in Html.
- 154. January 12th Kevin and Steve are searching for Medical insurance for the company and have to fill out the forms for quotes.
- 155. January 13th Dave is working on a meeting with Monsanto Kevin follows up with John Stucki but no decision yet. Kevin develops schemes for the DuPont presentation.
- 156. January 14th Charlie gets new web design from Kevin and starts working on it. January 15-16th Kevin travels to St Louis to meet with Ed McMillan. The prototype is shown and Ed approves but suggests that E-Markets needs a strong technical advisor also.
- 157. January 17th Kevin makes a speech at ISPA and afterward meets with Anheuser Busch on contracting barley.
- 158. January 20th John Stucki is joining the team and they met to bring everyone up to date. John suggests a simple file on file approach first and use Perl script database.

- 159. January 23rd Kevin and Dave plan a meeting with three programmers John Stucki wants to bring on board. Kevin worked through a proposal to merge with
- 160. January 24th Dave and Kevin travel to Omaha to meet with Charlie to discuss a software company in Ames IA sale. Do they have what we need? They also discussed the proposal.
- 161. January 25th Dave and Kevin finished the evaluation of the tomato and potato market for Zeneca.
- 162. January 27th Dave met with AGP Coop and Monsanto to discuss their contracting processes.
- 163. January 28th Dave met with John Stucki and three other potential programmers to line out the development process. From here forward Dave would become the business analyst responsible for converting the design documents into programming features for John to create.
- January 29th Dave holds a follow up meeting with Monsanto. January 31st Kevin lines out the first draft of the DuPont proposed system. The system would include contracting, seed sales and price information, Crop reports. Information, Delivery, Database and Account Management. The specific functions within those tabs include a database of Hybrids, Seed availability, delivery schedule, contract terms, contract acceptance, crop reporting, and pricing and contract management/reporting.
- 165. February 2nd-5th Dave and Kevin are worked on consulting projects of Context Consulting.
- 166. February 5, 1997 Dave, Rusty and Kevin work on the final presentation for DuPont.
- 168. February 7th followed up with DuPont for feedback on the presentation.
- 169. February 10th Dave Rusty and Kevin work on the proposal for DuPont following the meeting last week and the go forward tasks.
- 170. Feb 11th Dave and Kevin work on the business process plan and a plan to customize the Net Contract prototype to fit the OSC system. First task will be the full needs assessment of business processes, business goals, and building the functionality matrix, Then develop the Osc prototype. After getting buy-in on the prototype, then build and deploy the application and plan for enhancements.

- 171. Feb 14th and 15th Kevin worked on the proposal. This merger would allow for capital financing for E-Markets and would provide data on the Personal Business Centers of E-Markets websites.
- 172. February 16th Kevin set out the next two months work plan including Orientation, Application Demo development, the DuPont project, and Context Consulting project and setting up a demo Server. The application Demo development includes Password and Security system creation, Personal Business Center development, Net Contract, Net Connect and Net Market Development. Charlie and Kevin met to discuss the objectives and budget for the technical projects. The notes from this meeting lay out the expected time commitments from John Stucki and Jay Froscheiser and the expected cost of \$\subseteq 000 per day.
- 173. February 17th Charlie and Jay Froscheiser have been working with John Stucki and they can now do the database work. Charlie and John are scheduled to get together on the 27th Dave also met with Stine Seeds.
- 174. February 18th Kevin attended the seed conference at ISU and met with Gary Titus. Gary quoted a price on a server and desktop product called Lotus Notes. This is his recommendation for handling the community messaging for the OSC application. That system did not work and so E-Markets ended up building its own communicate program. Dave met with KS Equity Coop to discuss the Grain 2000 report.
- 175. February 19th Dave and Kevin finish work on the DuPont proposal.
- 176. Feb 20th the Dupont proposal is finalized and delivered to DuPont.
- 177. February 21st Kevin lined out the market research on the food corn industry and the major players. This information would prove to be critical in the positioning of the Net Contract in the future. The key players we have focused on are Frito Lay, Bartlett, Cargill and Scoular. We did not focus on Azteca Foods and as time would tell in 2000 Azteca would be the processor who provided the StarLink adulterated corn for the Taco Bell taco shells. Had they used the Net Contract system or had Aventis used the system there would have been no question as to what farmers grew the StarLink corn and what the obligations of the farmers were to sell the corn for animal feed only. The reason there would be no question is that Net Contract made it impossible to not have a contract signed and collected before the seed was transferred. Also when the seed was delivered the elevator would have had specific information that that farmer grew StarLink corn and could have investigated the load before it was received. Then the corn could be segregated for sale to Animal uses only. We did not make contact with Azteca until it was too late in 2000.
- 178. February 24th Kevin, Dave and John Stucki meet to go over the development projects and line out the activities for the week.
- 179. February 26th Meetings with Farmers Coop and Collingwood Grain in KS to discuss Grain 2000 report.

- 180. February 27th E-Markets team meeting where we discussed mostly Technical issues John and Ryan will work on setting up a Development server and it will be a Unix box. Need to check out how Cold Fusion works on Unix. Charlie is finalizing the meeting with on March 26th and Steve reported on the finances.
- 181. March 3rd Dave and Kevin met to work on the HTML mockup for the meeting. Paid for design costs on the company brochure Rusty has been working on.
- March 4th DuPont called E-markets back for a high-level proposal discussion on March 6th. Set up meeting with John Stucki for 3/8 to go through product design and get John started building the applications now that Charlie and he have the server set up. John and Charlie were using their own computers for the development.
- 183. March 5th Dave met with Harvest States grain and Kevin talked to Cerestar who is doing 3rd party contracting of grain. In the evening the group got together to go through the final DuPont presentation.
- 184. March 6th Meeting with DuPont marketing people and Dan Hammes.
- 185. March 7th E-Markets group meeting to discuss pricing for DuPont project and to schedule the task for putting together the final plan and workshop presentation. Also Grain Industry 2000 tasks were split out.
- 186. March 8th Dave and Kevin met with John Stucki and Ryan and presented the printed copies of the prototype and the spec sheets on the application.
- 187. March 10th Kevin followed up with John on questions from the design sheets.
- 188. March 11th worked on the Kodak consulting project and Grain 2000 survey.
- 189. March 12th E-Markets group meeting in Des Moines to review the development issues and thoughts.
- 190. March 13th Dave met with to discuss the Net Contract process.
- 191. March 14th Dave follows up with with a recap of the process and a write up on the benefits of the electronic application.
- 192. March 15th Kevin works on redesigning the Homepage and narrows the title bar and the 2000 page.
- 193. March 18th Kevin is working on the Kodak consulting project and Dave met with to discuss their High Oil Corn origination programs and their JV (ExSeed).
- 194. March 20th Kevin worked with John and Jay on connections and design questions.

- 195. March 21st Dave and Kevin met with John Stucki and Ryan. John is taking a two-week vacation.
- 196. March 22nd Kevin revised the prototype and outlined the Net Market product flow and design process.
- 197. March 26th Kevin and Charlie met with and made the presentation to merge the companies. Company purchased a used copier.
- 198. March 27th Dave and Kevin meet with Context Consulting to communicate the desire to do less consulting and focus the company's efforts fully on the E-Markets applications.
- 199. March 31st Kevin traveled to St Louis to meet with Ed McMillan and gave him an update on the company.
- 200. April 1, 1997 The Company purchased Desks and Office Equipment for its first Office.
- 201. April 2nd Kevin and Dave made a presentation to Context Consulting on B-Markets and the vision for the technology and the products. They referred a security software company called Secure computing in Minneapolis as a potential solution to the security issues with the web applications.
- 202. April 3rd Dave met with Iowa Crop Improvement Assoc. to discuss database synergies between the to companies. Charlie wants to bring the Prism Resources group to meet Kevin. He believes they can provide the security system needed.
- 203. April 4th Meeting with DuPont where they discussed a consulting project to help them understand how electronic commerce would apply to their contracting process. April 7th We purchased our first phone system.
- 204. April 8th until now all the employees and contractors were working out of their home offices or from Kevin's basement. April 8th is the first day in an office for the company.
- 205. April 9th Kevin, Rusty and Dave traveled to Omaha to meet with and Prism in separate meetings.
- 206. April 10th Meeting with Dave, Kevin and John Stucki to discuss technical development plan and progress. Also prepared for the DuPont meeting on 4/11. Kevin also ordered new computers from Micron.
- 207. April 11th Dave presented the proposal to Dan Hammes of DuPont. After the OSC prototype is complete then they will bring in other people to the meetings.
- 208. April 14th Changed the web IP address with the new location at the office and a switch to INS.net.

- 209. April 15th Kevin worked with INS to set up network in the office and set up the frame relay and router.
- 210. April 16th Discussion with Kevin, Dave and John concerning the need to completely fully define the functionality required and to decide on the Database.
- 211. April 17th Charlie finds out that Prism wants to talk to (Owned by Concern that they are going around E-Markets that they are
- 212. April 18th Rusty has been spending time selling the Grain2000 report to elevators and has had a number of conversations with Elevators about Net Contract and they seem to want the system.
- 213. April 19th Kevin traveled to Omaha and he and Charlie met with Prism to lay out all the requirements and to get to a final answer from Prism on what they will provide and at what cost so as to stop the running around.
- 214. April 20th Paid Ryan Clutter and John Stucki first checks for development work on the Home Page and Net Contract demo. Kevin presented a Storyboard design for Net Contract showing different access points and data access for grain companies, farmers and seed companies.
- 215. April 21st Dave and Kevin facilitated a needs analysis meeting with DuPont to determine what the field operatives and Marketing people needed from a web based application.
- 216. April 22nd Dave met with Context and Kevin followed up with DuPont on the meeting the day before. He said everything went well and he expected to be ready to define functionality needs May 1.
- 217. April 23rd John Stucki checked on the Solaris system needed for Prisms Security product and will investigate a SyBase license.
- 218. April 24th Dave, Kevin, Ryan and John met to explain the necessary Database structure and the table formats for Net Contract.
- 219. April 25th DuPont signed the proposal to do the needs analysis, Develop an OSC prototype and to customize the Net Contract Application to fit the needs for OSC Hired Michael Cantonwine to work on the database table development.
- 220. April 27th Lined out the DuPont User profiles for the Demo.
- 221. April 29th sent Grain2000 report to print. Set up first company health plan. Held a company meeting to assign tasks for the DuPont consulting project Rusty will focus on the needs analysis with the Elevators, Seed Companies and Grain Company (Continental Grain), Dave will manage the relationships with Matt and Dan, Kevin and Dave will complete the needs assessment write-up, Charlie will manage the building of the Security system and Kevin will handle the HTML development.

- 222. April 30th John Stucki recommends internal hosting of the application. Kevin and Dave work with DuPont to schedule follow up meetings and schedule meetings with Continental grain.
- 223. May 1, 1997 Kevin visited with McElvoy Seed Farms and Calgene about Canola contracting. Reorganized the Prospect list and contact manager for everyone to keep track of contacts with the key prospects for Net Contract applications.
- 224. May 2nd Purchased Modems and Network cards for the office set up to host. Met with DuPont about Development servers are set up and ready to start building the OSC Demo.
- 225. May 5th Jay is setting up the security Matrix instead of using Prism (too experimentary for the functionality delivered). Dave worked on the system diagram and Database description page and Rusty is working on the initial Elevator survey questions for DuPont.
- 226. May 6th Kevin, Rusty, Dave and John Stucki met with Dan Dyer of DuPont. Discussed the Application functionality and System Architecture. Charlie worked on the Seed Directory database table.
- 227. May 7th Dave and Rusty meet with Croplan Genetics and discuss the project to get needs from a seed company user's point of view.
- 228. May 8th Kevin met with Ryan to go over the HTML designs. Dave follows up with John Stucki on the design for DuPont and finished the Monsanto proposal. Rusty and Kevin finished the needs assessment plan and overview for the OSC program.
- 229. May 9th Kevin traveled to Omaha to work with Charlie on the security platform. Dave met with the security continue discussions on their seed business needs.
- 230. May 12th Dave and John Stucki went over the product design requirements and details of Net Contract.
- 231. May 13th Dave, Kevin and Rusty met with DuPont and Continental Grain to discuss needs for the OSC system from a Grain Co. point of view. They also met with Croplan Genetics again to discuss seed company needs. Charlie and Jay are finished with the Security platform and Login and they have set up the ability for FTP transfers to the website.
- 232. May 14th Dave met with IBM to discuss technical assistance. John Stucki ported Informix interface to the web and it works well. DuPont called and said the whole company is going to go to the state of the st
- 233. May 15th Dave, Kevin and John meet to line out the expectation of network design, Database integration, Network testing, Encryption procedures, Set up user accounts, determine whether we need a T-1 line yet, and the start of the functionality documentation. Also discussed page images in relation to the Database and the document

- functionality. DuPont sent a confirmation contract for the Consulting and Development of OSC.
- 234. May 19th Meeting with Osterbur Grain concerning Net Contract and the process for handling ExSeed corn contracts. This meeting elevated the biggest problem was coordinating with the elevator.
- 235. May 20th Meeting with Wyffels Hybrids to discuss the needs of a Seed company when using the Net Contract system. Needs analysis for DuPont customers.
- 236. May 21st Dave and John Stucki met to review the technical progress.
- 237. May 22nd Met with INS to start the move toward installing a T-1 line in the office. Dave met with Cargill Seed co for the DuPont needs analysis.
- 238. May 23rd Dave interviewed a prospective employee and met again with IA Crop Improvement Association. Kevin and Jay worked on website design.
- 239. May 24th Kevin researched the capability to generate emails from the contract document forms. May 27th Rusty worked with Wendy Gramm on establishing a Board of Directors for the company, Steve Ringlee worked on the trademark application. Dave and Kevin met with Cargill Seeds.
- 240. May 28th E-Markets company meeting to discuss progress on all OSC activities and the proposal feedback.
- 241. May29th Kevin and John Stucki meet concerning improving Unix skills, Steve is working on the Trademark with the attorneys and Dave is preparing a proposal for Croplan Genetics/LOL.
- 242. May 30th May was the first time the founders of E-Markets paid themselves for their work. They each were paid a modest sum of money from the cash generated from consulting projects and from selling Grain 2000.
- 243. May 31st Kevin, John and Dave worked on Website design and color schemes.
- 244. June 2-4, 1997 Dave and Kevin worked on and finished the needs assessment report for DuPont. Paid first installment for the DuPont consulting project.
- 245. June 6th Kevin designed a model for a trading application. A product that eventually was launched in 2000 as Attribute E-xchange. This product includes typical Bid Ask and Negotiation. This is a far different application than the Net Contract.
- 246. June 7th Dave and John Stucki worked on the database table corrections.
- 247. June 8th Kevin built the needs specification sheet for Trader functionality.

- 248. June 9th Testing on the OSC website, feedback does not work and the link to the elevator survey data is broken. Kevin met with Marvin Hayenga a future investor.
- 249. June 10th Rusty, Kevin and Dave met with Tom Adler to review the progress on the DuPont consulting project, the Needs assessment report, the Osom website and the Business needs they will be addressing next. New Server from Micron delivered.
- 250. June 11th Dave met with Croplan Genetics and National Corn Growers Association. Kevin worked on fitting Net Market into the E-Markets website.
- 251. June 12th Kevin and Dave met with John Stucki to discuss development progress and review the code specs to the design specs.
- 252. June 16th Dave had a progress call with DuPont and a follow-up meeting with Monsanto. Kevin was working on the Communicate design specifications. Charlie and Jay have been working on developing the Net Market Application. Charlie and Kevin discuss the fee structure. Kevin and John discuss setting up a bank of moderns and the issues around that system. Dave met with West Bend Coop and New coop to discuss the OSC system and using the Internet. New computer from CompUSA delivered.
- 253. June 18th Dave met with Seed broker Dave Heminger about the Net Contract system and OSC Kevin worked on system documentation for the presentation.
- 254. June 19th John Stucki reports development is on schedule and should be ready for Demo by the end of the month. Dave met with Aurora Coop in NE to discuss Net Contract and the OSC system. Kevin met with Calgene on Net Contract for Canola, Farmland and ADM concerning OSC. Rusty met with Blue Valley Coop.
- 255. June 20th Kevin and John Stucki met to review the OSC site.
- 256. June 23rd E-Markets group meets with John Stucki and covers the development freeze date on the Net Contract demo and the plan to populate the demo with Data. The group also met with DuPont to discuss the prototype and get a last buy-in before it is presented the end of the week.
- 257. June 24th Dave met with Albert City Coop to discuss the OSC system and the Internet. Rusty is populating the data in the Net Contract demo. Charlie is working on finding investors in Industries and Ron
- 258. June 25th Kevin is working on the Trader prototype design. June 26th E-Markets presents an online demo of the Osce site and the Net Contract application to DuPont Optimum Quality Grains group. Next we need to make contact with Peter Butler of DuPont to figure out Internet access within DuPont.
- 259. June 27th Kevin, Charlie and Dave meet with and joint arrangement for Net Market and the Trader application.

- 260. June 29th Kevin worked on website design revisions to include flashing quote stream and dynamically generated graphics.
- June 30th Dave met with and ExSeed. Kevin met Dale Millis to research the contacts in the Corn Processing companies to talk about OSC and get them prepared for the rollout in August. Met with Tom Adler and Pat Hilliard of DuPont in Ames to go over OSC functionality.
- July 1, 1997 Kevin met with Wyffels Hybrids to discuss OSC and the Net Contract application. Wyffels was excited about being able to know allocations available by delivery window. Showed the early prototype. John Stucki becomes an employee of E-Markets instead of an Independent contractor.
- 263. July 2nd meeting to discuss a request to be able to sort the elevators other than alphabetically evolved into a spec of only seeing elevators that a person is assigned to. That is a new requirement for security and data access. Conference with Peter Butler DuPont I/T about system Architecture and Database load capabilities. Dave met with Clarkson grain on the Net Contract application and Internet in general.
- 264. July 3rd Discussions with DuPont before 4th of July Holiday.
- 265. July 7th Interviewed Alan Schmitz a new Technical lead.
- 266. July 8th interviewed Brent for Technical Lead. July 8th Paid second for the DuPont consulting project.
- 267. July 9th Travel to KC to meet with Farmland Grain on Net Contract. Worked with Tom Adler on putting out communications on OSC.
- 268. July 10th met with CG&B a grain contractor and exporter to the Pacific Rim. Wants to be a part of the Net Contract system.
- 269. July 11th Meeting with DuPont on the product rollout and the production. Coordinating what products and actual specifications of the products that need to be in the system.
- 270. July 14th Dave attends USFGC Conference in Philadelphia and gives IP Grain talk. Also meets with Bill Wyffels on contracting process. Rusty and Kevin worked with DuPont to get list of growers and addresses to load into the database. Hired Alan Schmitz as Technical Lead, he will start 8/1.
- 271. July 16th traveled to Chicago for a meeting with Continental Grain to demo and explain OSC.
- 272. July 17th Traveled Illinois to meet with Clarkson Grain, ADM and Univ of IL to demo and explain how OSC will be used. One notable comment was that the system would give legitimacy to the contracts since everyone is involved at once.

- 273. July 18th Met with Frito Lay to explain the Net Contract to the new grain buyers.
- 274. July 21st met with Quaker Oats to explain Net Contract and solicit the purchase of the application. Not much interest since they buy mostly from Cargill.
- 275. July 22nd met with DuPont to discuss adding elevator to the system. John Stucki also finished the specification where a contract can be held in pending status for a defined period and then committed or disabled.
- 276. July 23rd replaced the 56K line and installed the T-1 line.
- 277. July 23-24 Kevin, Rusty, Dave met with and demoed OSC to all DuPont CPC's at Fort Des Moines.
- 278. July 25th Met with Farmland Industries in KC.
- 279. July 28th-29th working on Phase IV plan and contract for actual production application of Net Contract and OSC. Kevin is researching the potential of using a mapping program to generate the elevator location maps. Purchased the first Sun Server.
- 280. July 30th working on reporting requirements and naming conventions. DuPont also wants to fit a marketing program qualifier into OSC
- 281. July 31st Set up meeting with DuPont to talk about product rollout and cost of implementation of the production application.
- 282. August 1,1997 Alan Schmitz joined the company as the Technical Lead. Working on the Osc guidebook, which is the user manual for the system.
- 283. August 4th Meeting with DuPont on data tables and the queries that can be run on each. Also discussed the allocations and the security around disclosure of the allocations.
- 284. August 5th work with DuPont on setting up the delivery windows. Purchased Toshiba Laptop. Gerry (Board of Advisors) is at Ames office.
- 285. August 6th, OSC walk through with DuPont.
- 286. August 7th work with DuPont.
- 287. August 8th met with on a contract management system for real time production feedback.
- 288. August 11th printed the OSC guidebooks. Set up meetings for Demonstrations to the Crop Protection Consultants (CPC's).
- 289. August 12th Met with American Cyanamid and Mycogen seeds.

- 290. August 13th worked on adding states to the Net Contract coverage and adding grower check and DAR fields to the application.
- 291. August 14th Dave conducted OSC demo at Holiday Inn in Muscatine.
- 292. August 15th Dave conducted OSC demo at Wyffels Hybrids. Mycogen is interested in Net Contract and wants to pursue it set meeting for late September everyone is working on final details of the DuPont Demos.
- 293. August 18th Kevin attended NGFA meeting in KC to research the trader application.
- 294. August 19th Rusty and Dave conduct OSC demos in Lexington, IL.
- 295. August 20th, Rusty and Dave conduct OSC demos in Beardstown, II. Kevin was testing the demo online and need to speed up the screen builds. John and Alan are working on optimization.
- 296. August 21st Purchased a Back-up Sun Server. Worked with DuPont to monitor users on the system in order to create information on
- 297. August 22nd Rusty, Dave and Kevin demo OSC in Minneapolis to DuPont CPC's. Following the meeting they also met with Mycogen on follow up to interest in a next meeting.
- 298. August 25th travel to Lincoln NE. August 26th OSC User meeting in Lincoln NE.
- 299. August 27th OSC user meeting in Grand Island NE.
- 300. August 28th Travel back to Ames IA.
- 301. August 29th working on access and protocols with Netscape browsers.
- 302. September 1 Held a company lunch after the successful demonstrations last week. Ran testing of the OSC Demo to fix any last minute problems.
- 303. September 2, 1997 DuPont requests and receives a proposal on the production system of OSC including Net Contract. And the system is sold for the first time for commercial use.
- 304. September 6, 1997 DuPont has contracted as many acres of High Oil corn in the last three days as they did in the previous 12 months combined. The move to the production environment entailed the porting of the application from an internal demo site to the servers fully connected to the Http instead of Https. The port was done overnight. When DuPont asked for and obligated to the contract on September 2,1997 and then system went live when the port was completed.

- 305. The intent of this document is to detail the evidence that the Net Contract concept was conceived prior to September 1996, and worked toward beginning prior to September 1996. It was also enough of a compelling and real invention that two people quit their full time jobs prior to September 1, 1996.
- 306. The activity that takes place with an invention that is being turned into a business is that you need to establish the business case for the invention and also fully understand the needs of the potential customers and users before you can appropriately design the product. After the needs analysis then the design takes place and that entails more customer visits to establish that what you are designing is right for the market. A long-standing rule in software development is 80% planning and 20% coding. This project fit that metric very well. The coding began on the prototype, moved to the Demo environment and was put into production with the first commercial utilization in later 1997.

By October 1996 the company had two people solely dependent on the company for income and one person ½ dependent on the company for income therefore part of their time was spent doing consulting projects to earn money to feed their families. Please accept this as the sworn statement of three of the inventors and founders of E-Markets Inc.

MISCELLANEOUS

- 307. The reason there are not day-to-day work output of the software programming related to the reduction to practice of the invention is because much of it was done in Perl, which is an open source code but it is not date and chronologically packaged.
- 308. Furthermore, the main programmer was John Stucki, and, to the extent he may or may not have records, he was unwilling to cooperate (see First Supplement Declaration, previously of record). We are not aware of formal records kept by him, but if there are any, they are not in our custody or control, and are not available to us.
- 309. Based on experience and knowledge and belief, there is no general conventional practice of day-to-day documenting of the coding of programming, except perhaps in the government or if consultants are involved. We hired coders to code and not to document. Technical writers were hired to describe the code, but after the coding was done and after the period of time discussed above.
- 310. The consulting projects worked upon during this time period had the dual function of not only help fund the development of the invention, but also allowed access into companies that might have a use for the invention, and thus helping gain intelligence as to how the develop an actual working system according to the invention.
- 311. Documents discussed in or supporting certain of the paragraphs above are attached to this declaration. The paragraph number(s) of this declaration to which an attached document relates is indicated on the document.

DECLARATION

I hereby declare that all statements made herein of my own knowledge are true and that all statements made on information and belief are believed to be true; and further that these statements were made with the knowledge that willful false statements and the like so made are punishable by fine or imprisonment, or both, under Section 1001 of Title 18 of the United States Code, and that such willful false statements may jeopardize the validity of the application or any patent issued thereon.

.46

"We must develop a cash price discovery market away from traditional terminal markets through a variety of individual centers and national and global auction markets." - Ray Goldberg, Harvard University. "Without technology for making price comparisons, these [independent grocers] must put their trust in their suppliers." - Wall Street Journal, "By the year 2000, business through alternative food 5/1/96. distribution channels will be worth \$50 billion." - Datamonitor survey. "I think the internet is the way we're going to buy and sell in the future," Eric Duhachek, Newman Grove, Nebraska farmer, 4/23/96 AP article. Agribusiness is ten years behind in information technology." -Ed Osenbaugh, Softforce, Ames. W "Increasing consumer demands for food quality, variety, safety, and health, and the advent of biotechnology will continue to create demand for new specialty grain products. commodity marketing system is not adequate to meet those needs." -Brester, Biere, and Armbrister, Agribusiness, 1996. 90 percent + of cotton from members of the Plains Cotton Cooperative Association is marketed through their internally-developed electronic marketing system.

The Food Marketing Institute says about two-thirds of companies surveyed expect to have electronic mail capabilities by the end of 1996, and an increasing number use the internet to communicate with vendors. Precision farming has grown significantly, and is an indication of the large increase in information that will need to be managed and understood in crop production. Grain exporters add water and sand to barges of grain at export points to bring quality down to minimum USDA standards. About 70 percent of corn in Nebraska typically is delivered to the elevator as grade #1, but over 90 percent is purchased as grade #2. High oil corn acreage in the U.S. will increase to 500,000 acres in 1996 from 270,000 acres in 1995.

Executive Summary

Background and vision

A conversation with anyone currently involved in agriculture and the food industry will very likely lead to discussion surrounding some common themes, problems, and issues of concern:

- b There is a strong need and desire to better <u>coordinate</u> activities and <u>communicate</u> across traditional business lines.
- p Traditional systems of <u>price discovery</u> and marketing (e.g., commodity, terminal, and broker markets) no longer effectively serve the needs of farmers, agribusinesses, and food companies.
- p Technological, economic, and political changes continue to pressure agribusiness and food industry players to focus increased efforts on gathering and analyzing new information for business decisions.

E-MARKETS was formed to address the need of better connecting those in agribusiness and the food industry by providing the information infrastructure for improved communication, information flow, and price discovery. E-MARKETS will work to break down the barriers between sectors in the food system in order to promote effective delivery of the right products at the right time at the right price.

Mission

E-MARKETS mission is to provide those in agribusiness and food industry with innovative networking services and tools for improving information flow, communications, and market access. We will continually strive to provide the services that best address the needs and improve the profitability of our customers and that provide E-MARKETS shareholders with attractive earnings potential.

Goals

- b ?? network users connected within five years
- b \$?? million in sales within five years
- p Fifty percent gross contribution margins by the year 2001
- p \$?? million in before tax profits within five years

Strategies and objectives

Agribusiness and food industry focus

Over \$500 billion will be spent on food by consumers in the United States this year. While companies operating within agribusiness and the food industry vary in the way they operate, there is much commonality...

- b Specialty grain and oilseed markets will be developed first.
- b The rest of the grain industry and other industries that touch the grain industry will be next

Coalition building

A remarkable aspect of agribusiness and the food industry is the lack of coordination between companies in accomplishing mutually needed goals. Communication and transactions across traditional business lines doesn't occur they way it does in other industries such as telecommunications or healthcare. Therefore, one of the significant challenges to any company attempting to facilitate coordination through information technology is to build coalitions around its products and services. E-MARKETS will exercise a constant and creative effort at building coalitions of companies that have mutually shared interests.

- b The significant coalitions in the grain industry will include companies from the seed industry, farmers, grain merchandising companies, and end-users of grains and oilseeds.
- Some examples of major companies that will be apart of the E-MARKETS coalition include
- The nature of the products and services E-MARKETS offers will be to identify very broad coalitions of companies and groups to work together more effectively that do not have active contacts or ongoing activities today.

Alignment with customer and market

E-MARKETS will design its business and its products directly around the needs of customers and their markets. The approach will not involve blanket marketing of a product that is somewhat attractive to a large audience. Rather the approach is to work directly, on an ongoing basis, with customers to develop and then improve a product that is important to their business with laser precision.

Products and services will be developed hand-in-hand with specific customers in each market

July 11, 1996

- The focus of development efforts for each market will be around the needs of the five to ten (usually) companies that are the most important to the market in terms of sales, influence, brand, etc.
- E-MARKETS will put much emphasis on building and mainting personal relationships with key companies.

Rapid application of business model

While each market is unique, there will be an emphasis on "market pathways" where E-MARKETS can apply the products and services from one market to the next. The difference between companies and needs between the food corn market and food grade soybean market exist, but are small enough that a model developed for one will be quicly applicable to the other.

- The food corn market will be the first developed with other specialty grain and oilseed markets quick to follow
- Applications for the rest of the grain industry will be next in line, along with other industries that interact with the grain industry (i.e. animal production)

Pragmatic technology philosophy

The approach to information technology of E-MARKETS will be very pragmatic. The companies products and services will not be married to any one technology. The goal is to

- p Early technology partners include
- P The skills of the company will be built from the base of A
- Medium or long term opportunities are available for developing a proprietary position in development of electronic market protocols.

Keys to success

People

Information technology companies' success is even more closely aligned with the talent level of their team members than others, as software is ultimately an expression of intellectual creativity. There is additionally the need to have individuals who have an almost inherent understanding of agribusiness and food industry markets. Therefore, the creation of an environment that can attract and keep the "best and brightest" is key.

A challenge is to bring together an effective team with the skills and desire to make E-MARKETS the premier information, communication, and transaction tool for agribusiness and the food industry. Advantages E-MARKETS will have in building an effective organization include its unique mission within agribusiness (currently no other

46

companies quite like it), and hopefully the attractiveness of mid Iowa as a place to raise a family.

Product/service quality

Objectivity

E-MARKETS must be unquestionably objective in its approach and treatment of any specific company or its products. The interests of the company must be explicitly tied to the success of how its own products and services help other companies become more profitable and effective in their own business.

Integrity and reliability

The integrity of the service can not be compromised by unexpected or unpredictable break-downs:

Security

The service will need to provide bullet proof security. There will never be any question in minds of users as to the risk of use.

Ease of use

The service will provide an intuitive interface. A browser-style interface will be used.

Flexibility

The product needs to be flexible enough that users can easily customize it to meet their individual needs.

Fast response time

The product response time needs to be nearly instantaneous. Users will be encouraged to use the latest modern technologies.

Low cost relative to value

The cost of the service needs to be significantly and measurably less than the value provided. Our objective is to provide a service that provides value of at least 5 times the cost. We will implement a "5X" program that explicitly shows the bottom line value of the service relative to its cost.

Continual improvement

Long-term success of the business will rely on continual upgrades and improvements to the service.

46

Company Summary

The story

46

The founding management of E-MARKETS brings with it a very broad perspective from across the food system. Shared experiences range from family farms, to futures markets, to the emergence of information technology. These experiences have ingrained a common belief in the power of bringing disparate people and organizations together to work more effectively at practical solutions to feeding people better.

Product flow in the food system can be characterized by intense competition within industries, but very little coordination across industries. Examples of the problems associated with this abound:

- Commodity systems Many agricultural products are still traded through marketing channels that have not changed significantly in fifty-plus years. There are numerous pressures being put on these systems to change, but on the whole there is no underlying "infrastructure" to support development of alternative market prices and incentives for specific traits and qualities.
- Brokering breakdowns Many agricultural and food markets rely heavily on networks of brokers who buy, sell, and arbitrage through established networks of contacts and customers. While this is often a useful and valuable activity, there are many instances where the primary producer and ultimate end user could much more efficiently deal directly with another if there was a system to assist them in doing so.
- p Illiquid markets for price discovery The gradual disappearance of traditional terminal markets and significant market power of many vertically integrated companies in some markets have led to certain situations where marketing and pricing options are limited.

E-MARKETS has been formed to break down the barriers between different industries and sectors in the food system, and to promote the effective delivery of the right products at the right time and right price. E-MARKETS is committed to connecting disparate elements of the food system through the application of cutting-edge information technologies.

What is the business?

E-MARKETS is a network of information, communication, and secure electronic transactions for agribusiness and the food industry. Our innovative network technologies break down information and communication barriers that exist today in the food system, and serve as the electronic operating system for emerging systems of integrated food production and delivery. We provide an efficient and secure connection across organizations and individuals. We provide a new means for organizations to interact and do business with their suppliers, their customers, and even within their own

July 11, 1996

Products and Services

Product and service description

E-MARKETS provides the software and network infrastructure for efficiently and securely (1) disseminating and receiving information, (2) communicating within and across business boundaries, and (3) executing business to business transactions. Consulting services necessary to make the network effective and network robust will be offered as well.

E-MARKETS will develop its network around the needs of a select group of companies in a select group of markets.

Products and services will ultimately be tailored to meet the needs of a number of different types of customers. Different customer types in general include:

- b Members -
- b Subscribers -
- b Viewers -
- b Public

Competitive comparison

There are currently no direct competitors in agribusiness markets.

There are some young companies that are developing tools for business-to-business commerce on the internet that theoretically could represent competition.

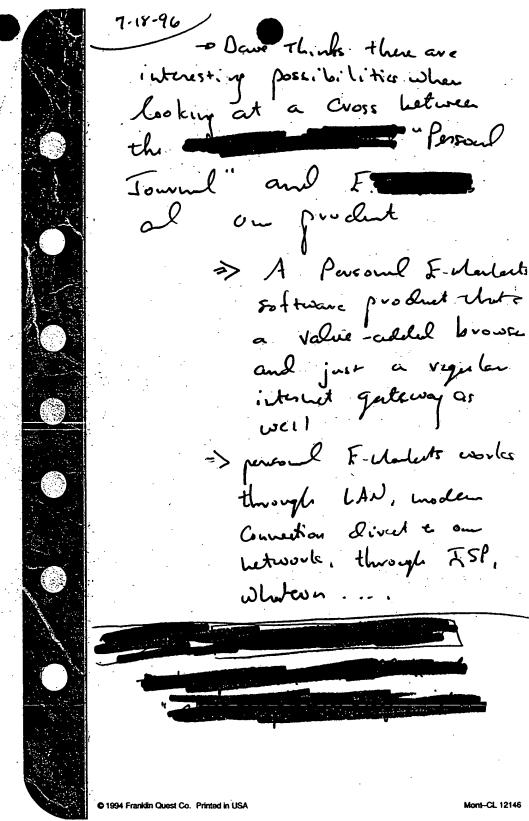

- b Industry.Net -
- b ARI Network Services

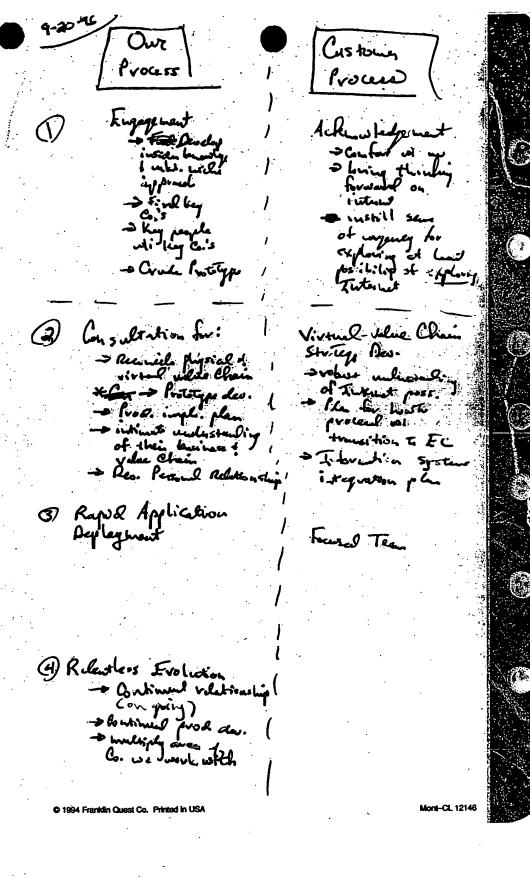

Another form of indirect competition is the possibility of a group of businesses forming a consortium and funding development of system of integrated information technologies. These efforts usually fund a systems integrator (IBM, EDS, UNISYS, Arthur Anderson) to do the job. An example is the where ag chemical manufacturers and distributors have spent million to have EDS develop a system of communication and electronic data interchange for them.

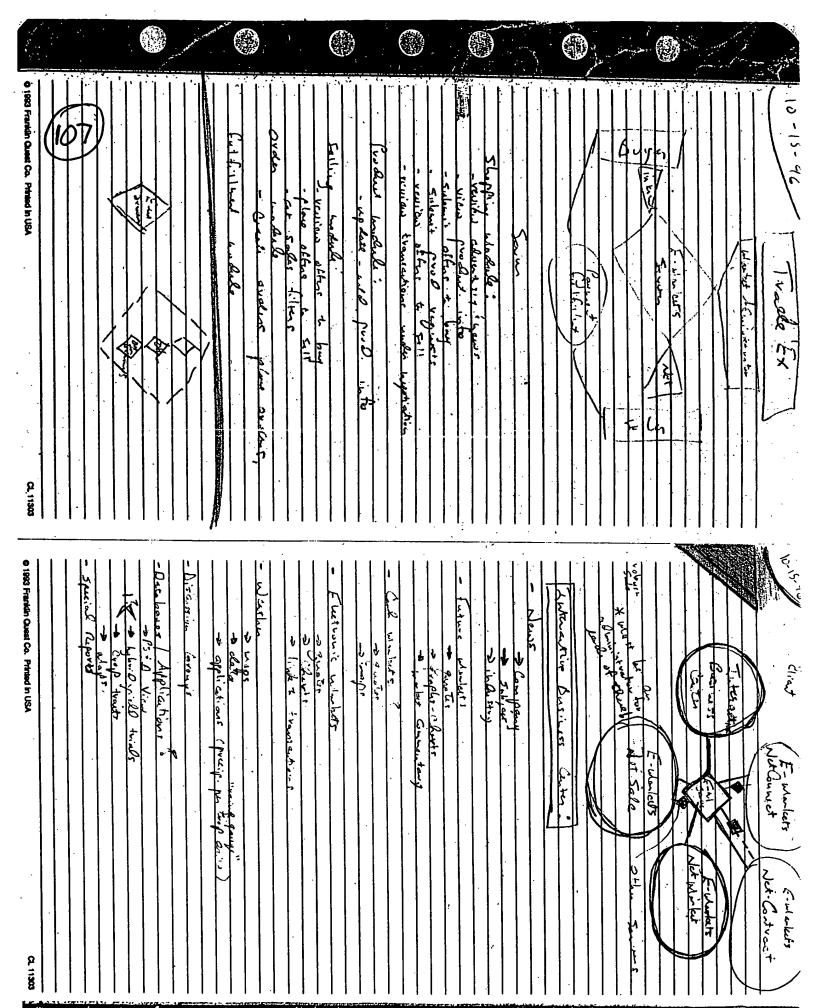

The likelihood of widespread efforts at systems integration is small. The traditional attitude of companies in agribusiness suggests this won't happen voluntarily, and most systems integrator firms have no knowledge or skills in agribusiness.

Food retailers, distributors, and manufacturers have had a very extensive effort underway for the last several years to develop a system of interaction under the banner of "efficient

WORTHINGTON SOURCING OFFICE

Issuing Point

Issued By

This document, confirming an order placed with Kevin Kimle by Dave Boudreau on 5/15/97, shall constitute a contract covering the work described herein.

SCOPE OF WORK - Contractor shall, except as otherwise expressly stated herein, furnish all labor, materials, tools, equipment, facilities and services and do all things necessary to provide Phase I thru III of the application development and deployment process for managing the High Oil Corn Extranet System in accordance with Contractor's attached Project Proposal dated 4/11/97, as amended, for DuPont's Des Moines, IA location.

PERIOD OF AGREEMENT - Spot Order. Work schedule as mutually agreed to by DuPont and Contractor.

COMPENSATION - As consideration for services properly provided hereunder, DuPont agrees to pay and Contractor agrees to accept as compensation cost per Contractor's proposal dated 4/11/97. Each invoice shall not exceed Section billed monthly for work completed in the previous month.

TERMS OF PAYMENT - Except as otherwise provided in any DuPont General Conditions referenced herein, terms of payment will be Net 15 days after DuPont's receipt of a properly prepared and correct Contractor invoice. Payment shall be considered made when payment checks are mailed by DuPont. Contractor's invoice will be accompanied by such records or other written proof as DuPont deems adequate to verify the billings appearing therein and shall be in such form as may be prescribed by DuPont's Contract Administrator.

CONTRACT ADMINISTRATOR - The DuPont Contract Administrator is Dan Hammes.

-NOTICES - Contractor shall submit required information and documents to DuPont as follows:

1. Correspondence involving the contractual relationship shall be sent to:

E. I. DuPont de Nemours and Company

100 Olu-Worthington, OH 43085-2261

OPTIMUM QUALITY GRAIN'S HIGH OIL CORN EXTRANET

PROJECT PROPOSAL

APRIL 11, 1997

237

INTRODUCTION

DuPont's Optimum Quality Grains (OQG) group is actively engaged in contracting for production of high oil corn (HOC) and modified-trait soybeans. The contracting process involves a complex network of OQG representatives, grain elevators, seed companies, and farmers as well as a significant amount of information and data that must be shared and communicated.

Key challenges in the contracting process involve monitoring contracting activity in timely fashion, building a multi-user secure database system, and communicating with a diverse group of personnel and business partners. A goal of OQG for the 1998 growing season is

E-MARKETS will help OQG address some of the key information challenges associated its contracting system. Project is a step towards building a new business information model for OQG's contracting activities. E-MARKETS will build a powerful set of Internet-based capabilities for contract management (an "Extranet") based on our Net Contract application prototype. The Extranet will:

- migrate OQG's current contracting database to a Web platform with multiple levels of access and security
- enable two-way information sharing and communication for those involved in contracting
- create new and convenient forms of information and data gathering and exchange
- help manage more effectively and efficiently the complex network of business relationships involved in high oil corn and modified-trait soybean contracting

Project involves a series of incremental phases that will identify the needs of OQG and its business partners, build a prototype set of applications around those needs, build consensus around deployment of the system, and set up an ongoing process for system maintenance and improvement.

APPROACH

The E-MARKETS' application development and deployment process involves four phases of work. This proposal encompasses the first three phases of the process.

Phase I is a Needs Assessment followed by Prototype Development in Phase II. The prototype will give the look and feel of the application but will not have full functionality and will use mock-up security, application, and database code. The objective of these first two phases will be to design, build, and test the prototype of the Extranet system that begins to address the highest priority needs connected with the OQG HOC business. Phases I and II will be completed by June 27.

Following completion of Phases I and II, E-MARKETS will complete Phase III, Application Customization and Development, by September 1

Extranet development process

Assessment Development Customization 8
Development

Phases of work for Project Oscar

| Project phase | Output | Key steps |
|---|---|---|
| Phase I: Needs assessment | Identification and prioritization of contracting needs and specifications An Extranet contracting capabilities matrix A prototype application development plan | Interviews with other DuPout personnel as well as key elevators and seed companies One half day workshop with key OQG Project team members |
| Phase II: Prototype development | A prototype application A presentation using the prototype and other materials for clear demonstration of the strategic benefits of the contracting application Database migration plan Application customization and development plan | Design the Extranet contracting application architecture Design page layouts for the contracting application Build mock-up databases Build mock-up functionality One half day prototype evaluation workshop with representatives of key business partners Critique prototype Facilitate buy-in process Solicit input for modifications |
| Phase III: Application customization and development | A fully functional Extranet contracting application An application deployment plan with proposed time frames and costs for next steps, along with time and cost estimates for subsequent steps Enhancement plan Maintenance plan | Incorporate architecture and page layout changes recommended from prototype review Construct needed databases Build functionality Test functionality Solicit feedback from application users |

| Dear Alan. | • | 7 July 1997 |
| As we discussed today, I am delight Engineer. Our offer is explained in | hted to offer you employment wi | th E-Markets as our Systems |
| 1. Position. You will serve as our software and hardware tools for ou will ask you to manage the network our product lines. You will work to John, who is our Engineering Di | r customers and for our own pro king, telecommunications, serve closely with all the associates in | duct line. Specifically, we rand security issues attending |
| 2. You will start employment on A scheduled to be complete by that d we would have no objection if you week until September 1st, when the | ate; however, because we all rec | ognize that time slips occur, to a total of twenty hours pe |

you leave Norwest on good terms. In addition, your consulting with other groups such as the

and ___

B. We also offer participation in our E-Markets Stock Option Plan, which is now under

during the next twelve months and that, as we meet them, we will review your compensation accordingly. As we noted during our conversation, we are not limiting anyone to a twelve month compensation review, nor to an inflationary increase. We strongly believe in pay for

consideration by our shareholders and directors. After they have adopted the Plan, you will be granted an initial block of the options, which will be exercisable at per share into the Company's common shares. This amount of initial options represents one percent of the total of shares issued and those reserved for options. If we assign a reasonable valuation to

the value of the firm but also because of the additional options you will receive. You will be

individual and corporate goals, as noted above. You will vest fifty percent in these shares at

considered for new option grants at future times depending upon the achievement of

per year, paid monthly on the fifteenth of

projects will have important milestones

), then your option value

This amount would grow not only because of the increase in

Optimum' quality grains

OSC Guidebook

August 11, 1997

About OSC

OSCILLIS a Web-based, crop production contracting application. It is accessed using an Internet browser. An important part of OSCILLIS is its on-line database containing a wide variety of information related to the DuPont Quality Grains' crop production contracting efforts. The database includes information on:

- participating elevators,
- participating seed companies,
- growers,
- contracts.
- acreage allocations,
- key contacts, and
- other information.

Registered users and Guests can access OSO on the Internet by going to DuPont's Optimum University site at:

http://www.dupont.com/ag/qualtiygrains/

Click on OSC once at Optimum University. When users first get to OSC they can "bookmark" the OSC site if they wish. The direct address for OSC is http://www.e-markets.com:42000/dupont/

Registered users will be assigned usernames and passwords that will provide secure access to OSC Important registered users will be participating grain elevators, participating seed companies, and DuPont Field Representatives, Elevators will be able to view and manage information for contracts with delivery to their own facilities. Seed company District Sales Managers (DSMs) will be able to view and mange information from contract they originate. Seed company management will be able view information for contracts that their company originates or for contracts that designate that company for preferred seed purchase. Users will be able to access only information relevant to their own business.

Guests can also access OSC. Guests will be growers and others that are not registered users (those with assigned usernames and passwords). Guests will have only minimal access to OSC. capabilities and information.

In order to help understand some of the terminology associated with OSCIE, a glossary of terms has been included beginning on page 19.

OSC was developed for DuPont Quality Grains by E-Markets, an Internet application development company based in Ames, IA.
